Sanitary report from Santiago.

SANTIAGO DE CUBA, *February 19, 1898.*

SIR: I have the honor to inform you that 91 deaths have been recorded for the week ended February 19. Of these, 6 were from tuberculosis, 10 from dysentery, 18 from enteritis, 4 from typhomalaria, 12 from pernicious and 7 from remittent fevers, and 9 from paludic cachexia; the rest from noncontagious diseases.

The sanitary condition of Santiago has become somewhat better, owing to the fact that the public has awakened from its usual apathy toward hygienic measures and live more in accordance with civilization. The streets are cleaner and all the garbage is collected and burnt. No pools are allowed to remain to poison the air, and the poor are better taken care of than before.

Respectfully,

Dr. H. S. CAMINERO,
Sanitary Inspector, U. S. M. H. S.

The SUPERVISING SURGEON-GENERAL,
U. S. Marine-Hospital Service.
